

7.1.3 - Describe the facilities in the Institution for the management of the following types of degradable and non-degradable waste

- Solid waste management
- Liquid waste management
- Biomedical waste management
- E-waste management
- Waste recycling system
- Hazardous chemicals and radioactive waste management

Management of degradable and non-degradable waste

- The institute has implemented a comprehensive waste management system to handle both degradable and non-degradable waste efficiently. To encourage responsible waste disposal, waste segregation bins have been strategically placed across the campus, allowing students and staff to separate degradable and non-degradable materials at the source. This initiative promotes environmental awareness and ensures proper waste sorting for further treatment and disposal.
- A plastic bottle-crushing machine has been installed in the canteen, significantly reducing plastic waste by crushing bottles for easier recycling. This facility minimizes the environmental impact of plastic and supports the institute's efforts toward sustainability.
- The institution also has a dedicated waste management staff responsible for maintaining cleanliness and ensuring that waste is handled and disposed of properly. This team plays a crucial role in managing the campus's waste, ensuring it is segregated, collected, and processed efficiently.
- Additionally, water recycling systems have been installed in the hostel areas to conserve water. These systems treat and recycle greywater for non-potable uses such as gardening and cleaning, helping reduce water wastage and lowering the institution's ecological footprint.
- Through these initiatives, the institution demonstrates its strong commitment to sustainability, promoting waste management solutions that benefit both the campus and the environment.
